

Ramon Macedo

Data Engineer / Analytics Engineer | AI Automation and MCP Workflows

Brazil | Remote | Relocation | ramonsouza26@gmail.com | +55 22 98825-0159 | [GitHub](#) | [LinkedIn](#) | [YouTube](#)

PROFESSIONAL SUMMARY

Data Engineer / Analytics Engineer with 5 years of experience building data pipelines, analytics products, automation workflows, and modern Microsoft Fabric architectures using SQL, Python, PySpark, Spark SQL, Power BI, OneLake, and Lakehouse design. Mechanical Engineering background from UFRJ with industrial and Oil and Gas experience. Daily AI practitioner who uses and configures LLM coding agents, Claude Code, Model Context Protocol (MCP) servers/connectors, and document/process automation workflows to turn manual work, unstructured files, and operational data into reliable datasets, dashboards, and decision-support tools.

CORE SKILLS

Data Engineering: Python, SQL, PySpark, Spark SQL, Microsoft Fabric, OneLake, Lakehouse, Medallion Architecture, ETL/ELT, data warehousing, metadata-driven ingestion.

Analytics and BI: Power BI, DAX, semantic models, SQL Endpoints, Row-Level Security, dashboard design, self-service analytics, stakeholder discovery.

AI Automation: LLM-assisted development, Claude Code, ChatGPT/Codex workflows, Model Context Protocol (MCP), AI agents, prompt/workflow design, document extraction, structured-output validation.

Business Automation: Power Automate, Power Apps, UiPath, API-based workflow automation, process mapping, documentation automation, governance-oriented delivery.

Applied Data Science: EDA, predictive maintenance thesis, Random Forest, K-Means, anomaly detection and forecasting concepts, operational analytics.

PROFESSIONAL EXPERIENCE

Priner Serviços Industriais - Data Engineer - AI Automation and Microsoft Fabric (01/2026 - Present)

- Lead the migration and technical implementation of the enterprise data ecosystem on Microsoft Fabric, centralizing operational data into OneLake and enabling scalable analytics, reporting, and automation.
- Design and optimize multi-stage ETL/ELT pipelines across Bronze, Silver, and Gold layers, improving data quality, governance, and readiness for downstream analytics products.
- Build Python, PySpark, Spark SQL, SQL Endpoint, and Power BI solutions for enterprise datasets, reducing manual reporting effort and improving analytics reliability for business teams.
- Use and configure AI-assisted engineering workflows with Claude Code, LLMs, and Model Context Protocol (MCP) servers/connectors to accelerate development, documentation, data exploration, and controlled access to project tools/context.
- Automate manual and document-heavy operational workflows, transforming unstructured or semi-structured inputs into structured datasets, reports, and decision-support outputs with validation through tests, row counts, schema checks, and query comparisons.
- Partner with cross-functional stakeholders to identify bottlenecks, prototype internal tools, validate outputs, and iterate until solutions become useful in daily operations.

Halliburton - Field Engineer Trainee (07/2025 - 11/2025)

- Selected for the competitive DEEP Program, working with high-frequency real-time operational data acquisition across Drilling and Wireline environments.
- Processed, validated, and interpreted operational logs and sensor/time-series data to mitigate deployment risks and support technical decisions under uncertainty.
- Collaborated in safety-critical industrial operations, reinforcing strict data reliability, quality standards, and operational discipline for mission-critical workflows.

101Códigos - Mid-level Data Analyst (11/2024 - 07/2025)

- Led end-to-end data pipeline projects from architecture design to production deployment, structuring relational databases with optimization and normalization best practices.
- Built business applications with Power Apps and Power Automate backend workflows, reducing manual data entry and improving operational consistency for enterprise clients.
- Developed Power BI semantic models and dashboards with advanced DAX, automated refreshes, and role-based access patterns for executive and operational stakeholders.
- Conducted technical discovery with business managers, translating functional requirements into scalable data deliverables and secure analytics workflows.

Freelancer - Data Consultant (01/2023 - 07/2025)

- Delivered 10+ end-to-end data products, including corporate dashboards, SQL/Python modeling solutions, and predictive machine learning projects using Random Forest and K-Means.
- Conducted exploratory analysis and translated raw datasets into automated metrics, helping clients turn messy data into clearer operational and strategic decisions.

Priner Serviços Industriais - Mid-level Data Analyst (03/2021 - 08/2024)

- Led 15+ analytics projects and earned two promotions by designing data models, structured dataflows, and data warehouse solutions using SQL, Microsoft Fabric, and Power BI.
- Automated ETL and data integration workflows with Python, UiPath, and Power Automate, contributing to an estimated 23% reduction in operational costs.
- Built production-grade Power BI dashboards with advanced DAX, Row-Level Security, governance rules, and training sessions to expand self-service analytics adoption.

ACADEMIC EXPERIENCE

Federal University of Rio de Janeiro (UFRJ) - Volunteer Programming Tutor (06/2018 - 03/2021)

- Taught Python programming, core data structures, and debugging techniques to adult learners and students preparing for data analysis work.
- Designed hands-on curriculum with Jupyter Notebooks and practical coding tutorials to support structured, self-paced learning.

EDUCATION, CERTIFICATIONS AND LANGUAGES

Education: Mechanical Engineering - Federal University of Rio de Janeiro (UFRJ), 08/2024.

Certification: Microsoft Fabric Analytics Engineer Associate (DP-600).

Recognition: Final thesis recognized in Predictive Maintenance (Data Science).

Languages: Portuguese native; English fluent; Spanish basic; French basic.
